

Asset Allocation Bi-Weekly

By Patrick Fearon-Hernandez, CFA

Confluence Investment Management offers various asset allocation products which are managed based on “top down,” or macro, analysis. We publish asset allocation thoughts on a bi-weekly basis, updating the report every other Monday, along with an accompanying [podcast](#).

The Inflation Adjustment for Social Security Benefits in 2026

November 17, 2025

Even for dedicated, successful investors who have built up a substantial nest egg, Social Security retirement and disability benefits can be an important part of their financial security. For many people, Social Security benefits are the only significant source of income in advanced age. On average, these benefits account for about 30% of retired people’s income and more than 5% of all personal income in the US. One aspect of Social Security is especially important in today’s period of elevated price inflation: By law, Social Security benefits are adjusted each year to account for changes in the cost of living. In this report, we discuss the Social Security cost-of-living adjustment (COLA) for 2026 and what it implies for the economy.

In mid-October, the Social Security Administration announced that Social Security retirement and disability benefits will increase 2.8% in 2026, bringing the average retirement benefit to an estimated \$2,071 per month (see chart below). The increase will bump up the average recipient’s monthly benefit by approximately \$56. The benefit increase was right in line with expectations, given that it is computed from a special version of the Consumer Price Index (CPI) that is widely available. The COLA process also affected some other aspects of Social Security, although not necessarily by the same 2.8% rate. For example, the maximum amount of earnings subject to the Social Security tax was raised to \$184,500, up 4.8% from the maximum of \$176,100 in 2025.

Media commentators often fret that the Social Security COLA could be “eaten up” by rising prices in the following year or that the benefit boost could provide a windfall if price increases decelerate. In truth, the COLA merely aims to compensate beneficiaries for price increases over the *past* year. It is designed to maintain the purchasing power of a recipient’s benefits given past price changes, with price changes in the coming year being reflected in next year’s COLA.

The inflation-adjusted nature of Social Security benefits is also important for the overall economy. Since so many members of the huge baby boomer generation have now retired, and since more people are drawing disability benefits than in the past, Social Security income has become a bigger part of the economy (see chart below). In 2024, Social Security retirement and disability benefits accounted for 4.9% of the US gross domestic product (GDP). Having such a large part of the economy subject to automatic cost-of-living adjustments helps ensure that a big part of demand is insulated from the ravages of inflation, albeit with some lag. If Social Security income were fixed, a large part of the population would see its purchasing power drop more sharply, which might not only reduce demand, but could also spark political instability. The added benefits in 2026 will help buoy demand, although they will also probably keep inflation somewhat higher than it otherwise would be.

Finally, it’s important to remember that an individual’s own Social Security retirement benefit isn’t just determined by inflation. The formula for computing an individual’s starting benefit is driven in part by a person’s wage and salary history. Higher compensation will boost a retiree’s initial retirement benefit, which will then be adjusted by the COLA over time. As average worker productivity increases, average wages and salaries have tended to grow faster than inflation. The average Social Security benefit has therefore grown much faster than the CPI. Over the last two decades, the average Social Security retirement benefit has grown at an average annual rate of 3.8%, while the CPI has risen at an average rate of just 2.6%. In sum, Social Security benefits provide an important source of growing purchasing power that helps buoy demand and corporate profits in the economy.
