

## All Cap Value • Value Equity Strategies

All Cap Value is focused on companies that range in market capitalization to create a diversified portfolio of businesses with capital appreciation potential. These companies are selected using a bottom-up, fundamental research process that seeks to identify individual businesses that possess substantial competitive advantages and are trading at discounts to our estimate of intrinsic value. The portfolio typically comprises 30-35 holdings and is expected to result in low to moderate turnover. The strategy is appropriate for clients whose primary objective is capital appreciation and whose secondary objective is dividend income.

### Market Commentary

The stock market had a solid start to the year, with the S&P 500 Index up 6.2%, as COVID-19 cases declined, vaccinations increased, and expectations for strong economic growth continued to improve, furthered by another large stimulus package. As a result, in mid-February, the “Top 6” FAANG+ stocks (Apple, Microsoft, Amazon, Google, Facebook, Tesla) that have powered the markets over the past two years (as we have previously highlighted) began to underperform. Since then, the market has shifted away from “pandemic-proof” growth stocks and has refocused on businesses that are driven by economic growth. These “economically sensitive” stocks are the vast majority in the stock market, and many are considered value stocks (Financials, Industrials, Energy, Materials, etc.). This is all reflected in the year-to-date returns of the equal-weighted S&P 500 (+11.5%) and the Russell 3000 Value (+11.9%).

Despite the overhang from a year-long pandemic, economic expectations are high and this is being reflected in the stock market. Zero interest rates and fiscal stimulus continue to support asset inflation, but this has not translated into higher consumer inflation (a headschratcher for students of history). At the same time, the economy is poised for a “postwar boom” as consumers are flush with cash and eager to get out and celebrate post-pandemic. As a result, long-term interest rates have risen off the floor and there continue to be characteristics indicative of a speculative environment (examples include GameStop, SPACs, day trading, etc.).

Even with strong economic growth, this optimistic market still carries much risk and uncertainty, so it is important to have a solid investment philosophy that resists the siren song of speculation. As always, we continue to stay focused on owning quality companies with good management teams that are trading at attractive valuations.

### Strategy Commentary

The Confluence All Cap Value strategy returned 4.9% (gross of fees) in the first quarter, slightly trailing the S&P 500 return of 6.2%. [*The net-of-fees return for the same period was +4.1% QTD. See disclosures on p.3 for fee description; actual investment advisory fees may vary.*]

The All Cap Value portfolio had a solid start to the year and performed mostly in line with the S&P 500. The portfolio had strong returns from NXP (a leader in automotive analog semiconductors), Lowe’s (home improvement retailer), Google (internet search and advertising), Gates Industrial (industrial belts and hoses), and Kinder Morgan (energy infrastructure). The portfolio’s slight underperformance relative to the S&P 500 came entirely from the Financials sector. Banks had a strong start to the year (driven by rising interest rates), but the Financial names in the All Cap Value portfolio are focused on insurance and niche financials that have strong competitive advantages and are less dependent on interest rates. Our insurers (W.R. Berkley, Berkshire Hathaway, Markel, Progressive) continue to benefit from solid premium pricing and an industry-wide focus on profitability.

Morningstar (financial information provider), Brown & Brown (insurance brokerage), and Black Knight (mortgage technology) were down in the first quarter with the rotation from growth to value pressuring their growth-driven premium valuations. Cannae also declined in the first quarter as its private equity-based returns can be lumpy despite continued growth in underlying intrinsic value.

There were no changes to the portfolio in the first quarter. Overall, we believe All Cap Value holds a great portfolio of high-quality businesses that should compound well over the long term.

Confluence Investment Management LLC claims compliance with the Global Investment Performance Standards (GIPS®) and has prepared and presented this report in compliance with the GIPS standards. Confluence Investment Management LLC has been independently verified for the periods August 1, 2008, through December 31, 2019. The verification report is available upon request. A firm that claims compliance with the GIPS standards must establish policies and procedures for complying with all the applicable requirements of the GIPS standards.

Verification provides assurance on whether the firm's policies and procedures related to composite maintenance, as well as the calculation, presentation, and distribution of performance, have been designed in compliance with the GIPS standards and have been implemented on a firm-wide basis. Verification does not provide assurance on the accuracy of any specific performance report.

GIPS® is a registered trademark of CFA Institute. CFA Institute does not endorse or promote this organization, nor does it warrant the accuracy or quality of the content contained herein.

The All Cap Strategy was inception on January 1, 2005, and the current All Cap Value Composite was created on August 1, 2008. Performance presented prior to August 1, 2008, occurred while the Portfolio Management Team was affiliated with a prior firm and the Portfolio Management Team members were the primary individuals responsible for selecting the securities to buy and sell. Confluence Investment Management LLC is an independent registered investment adviser. Results are based on fully discretionary accounts under management, including those accounts no longer with the firm. Past performance is not indicative of future results. The U.S. Dollar is the currency used to express performance. Returns are presented gross and net of all fees and include the reinvestment of all income.

<sup>1</sup> Pure gross returns are shown as supplemental information to the disclosures required by the GIPS® standards.

<sup>2</sup> Net-of-fee performance was calculated using the highest applicable annual bundled fee of 3.00% applied quarterly (2.75% prior to 7/1/08). This fee includes brokerage commissions, portfolio management, consulting services and custodial services. The Confluence fee schedule for this composite is as follows: 0.60% on the first \$500,000; 0.55% on the next \$500,000; and 0.50% over \$1,000,000. There are no incentive fees. Clients pay an all-inclusive fee based on a percentage of assets under management. The collection of fees produces a compounding effect on the total rate of return net of fees. Bundled fee accounts make up 100% of the composite for all periods. Actual investment advisory fees incurred by clients may vary. Wrap fee schedules are provided by independent wrap sponsors and are available upon request from the respective wrap sponsor. A complete list of composite descriptions is available upon request. Policies for valuing investments, calculating performance, and preparing GIPS Reports are available upon request. The annual composite dispersion is an equal-weighted standard deviation, using gross-of-fee returns, calculated for the accounts in the composite for the entire year. The three-year annualized standard deviation measures the variability of the composite gross returns over the preceding 36-month period. The All Cap Value Composite contains fully discretionary All Cap Value wrap accounts. All Cap Value is a value-based, bottom-up portfolio that utilizes stocks from all market capitalizations.

N/A-Composite Dispersion: Information is not statistically meaningful due to an insufficient number of portfolios in the composite for the entire year. N/A-3yr Std Dev: Composite does not have 3 years of monthly performance history. Prior to August 1, 2008, the composite was named the All Cap Global Composite. Effective August 1, 2008, the composite definition was changed to no longer emphasize global ADRs but the underlying portfolio and strategy did not change.

**Individual holding performance and contribution methodology as well as a list of every holding's contribution to the strategy can be obtained by contacting Confluence. Material is published solely for informational purposes and is not an offer to buy or sell or a solicitation of an offer to buy or sell any security or investment product. Top 5 contributors/detractors reflects the strategy's best and worst performers, based on each holding's contribution to the sample account for the period stated. Holdings identified do not represent all of the securities purchased, sold or recommended. Information is presented as supplemental information to the disclosures required by GIPS® standards. Opinions and estimates are as of a certain date and subject to change without notice. Investment or investment services mentioned may not be suitable to an investor and the investor should seek advice from an investment professional, if applicable. Past performance is no guarantee of future results. Investing in securities involves the risk of loss of the amount invested that investors should be prepared to bear. There can be no assurance that any investment objective will be achieved or that any investment will be profitable or avoid incurring losses. Indices: The S&P 500 Index and Russell 3000 Value Index are shown as additional information. These indices are unmanaged. An investor cannot invest directly in an index. They are shown for illustrative purposes only & do not represent the performance of any specific investment. Index returns do not include any expenses, fees or sales charges, which would lower performance.**
