

Value Opportunities • Value Equity Strategies

Value Opportunities is a concentrated portfolio of businesses that range in market capitalization. Companies are selected using a bottom-up, fundamental research process that seeks to identify individual businesses that are trading at substantial discounts to our estimate of intrinsic value and have near-term catalysts in which to unlock the value. The portfolio may have concentrations in both individual holdings and/or industries. It typically comprises 8-12 holdings and is expected to result in high annual turnover. The strategy is appropriate for clients seeking an aggressive approach to generating capital appreciation.

Market Commentary

The second quarter of 2020 recorded an impressive rebound from the pandemic-induced lows earlier this year. The S&P 500 Index increased 20.5% in the second quarter, bringing the year-to-date return to -3.1%. Value stocks continue to struggle, with the Russell 3000 Value Index down 16.8% year-to-date despite being up 14.6% in the second quarter.

As discussed in our first quarter commentary, market returns in 2020 have bifurcated between the “top five” FAANG+ stocks and the remaining stocks in the S&P 500. This split widened further in the second quarter with the top five (Microsoft, Apple, Amazon, Google, Facebook) now representing approximately 22% of the S&P 500, compared to 17% at year-end 2019, with a year-to-date weighted average return of 25.4%. By contrast, the S&P 500 equal-weighted index has returned -10.8% year-to-date, while the S&P 500 market cap-weighted index falls in the middle at -3.1%. In these unusual times, it is important to understand this divergence because chasing the overweight top positions in the S&P 500 has not historically been a recipe for outperformance over the long term.

The first two quarters of 2020 were historic. There is still a lot of uncertainty surrounding the pandemic, the government response and stimulus, and how the financial markets are factoring in all the potential outcomes. Needless to say, it will be interesting to see what the final two quarters of 2020 bring. In the meantime, we continue to stay focused on buying high-quality companies with capable management teams that are trading at a discount to our estimate of intrinsic value.

Strategy Commentary

Value Opportunities was up 18.7% in the second quarter, resulting in a year-to-date return of -11.8% (both gross of fees). *(Net-of-fees returns for the same periods were +17.8% and -13.1%. See disclosures on p.2 for fee description; actual investment advisory fees may vary.)*

With the strong outperformance of the FAANG+ stocks year-to-date, Value Opportunities trailed the S&P 500 primarily from being underweight Technology along with NXP Semiconductors underperforming the sector. The other areas of relative underperformance were the Materials and Consumer Staples sectors.

There were no changes to the Value Opportunities portfolio in the second quarter. Given the number of opportunistic purchases made during the first quarter, the portfolio is well-positioned with high-quality businesses that were purchased at attractive prices.

The top-performing and worst-performing positions during the quarter were as follows:

Security	Avg Weight	Contribution
Top 5		
NXP Semiconductors N.V.	9.45	3.37
Frontdoor, Inc.	12.43	3.26
Dollar Tree, Inc.	10.86	2.77
Charles River Laboratories International, Inc.	6.36	2.24
Axalta Coating Systems Ltd.	7.34	2.17
Bottom 5		
Compagnie Financière Richemont SA	5.54	0.99
Avanos Medical, Inc.	6.41	0.58
Healthcare Services Group, Inc.	5.46	0.10
Markel Corporation	10.02	(0.10)
Berkshire Hathaway Inc. (Class B)	9.39	(0.22)

(Contribution data shown from a sample account)

ABOUT CONFLUENCE INVESTMENT MANAGEMENT LLC

Confluence Investment Management is an independent Registered Investment Advisor located in St. Louis, Missouri, that provides professional portfolio management and advisory services to institutional and individual clients. Confluence’s investment philosophy is based upon independent, fundamental research that integrates evaluation of market cycles, macroeconomics and geopolitical analysis with the firm’s value-driven, company-specific approach. The portfolio management philosophy begins by assessing risk and follows through by positioning clients to achieve their income and growth objectives.

Application of the investment strategy as of a later date will likely result in changes to the listing. Sector weightings and holdings of individual client portfolios in the program may differ, sometimes significantly, from these listings. Contact Confluence for a complete list of holdings.

All investments carry a certain degree of risk, including possible loss of principal. It is important to review your investment objectives, risk tolerance and liquidity needs before choosing an investment style or manager. Equity securities are subject to market risk and may decline in value due to adverse company, industry or general economic conditions.

Confluence claims compliance with the Global Investment Performance Standards (GIPS®) and has prepared and presented this report in compliance with the GIPS standards. Confluence has been independently verified for the periods of 8/1/2008 through 12/31/2018. A copy of the verification report is available upon request. Verification assesses whether: 1. the firm has complied with all the composite construction requirements of the GIPS standards on a firm-wide basis, and 2. the firm's policies and procedures are designed to calculate and present performance in compliance with the GIPS standards. Verification does not ensure the accuracy of any specific composite presentation. The Value Opportunities Strategy was inceptioned on April 1, 2000, and the current Value Opportunities Composite was created on August 1, 2008. Performance presented prior to August 1, 2008, occurred while the Portfolio Management Team was affiliated with a prior firm and the Portfolio Management Team members were the primary individuals responsible for selecting the securities to buy and sell. Confluence Investment Management LLC is an independent registered investment adviser. Results are based on fully discretionary accounts under management, including those accounts no longer with the firm. Past performance is not indicative of future results. The U.S. Dollar is the currency used to express performance. Returns are presented gross and net of all fees and include the reinvestment of all income.

¹Pure gross returns are shown as supplemental information to the disclosures required by the GIPS® standards.

²Net-of-fee performance was calculated using the highest applicable annual bundled fee of 3.00% applied quarterly (2.75% prior to 7/1/08). This fee includes brokerage commissions, portfolio management, consulting services and custodial services. The Confluence fee schedule for this composite is as follows: 1.00% on the first \$500,000; 0.90% on the next \$500,000; and 0.75% over \$1,000,000. There are no incentive fees. Clients pay an all-inclusive fee based on a percentage of assets under management. The collection of fees produces a compounding effect on the total rate of return net of fees. Bundled fee accounts make up 100% of the composite for all periods. Actual investment advisory fees incurred by clients may vary. Wrap fee schedules are provided by independent wrap sponsors and are available upon request from the respective wrap sponsor.

A complete list of composite descriptions is available upon request. Additional information regarding policies for valuing portfolios, calculating performance, and preparing compliant presentations are available upon request. The annual composite dispersion is an equal-weighted standard deviation calculated for accounts in the composite for the entire year. The Value Opportunities Composite contains fully discretionary Value Opportunities wrap accounts. Value Opportunities is a concentrated, value-based, bottom-up portfolio that utilizes stocks from all market capitalizations with a focus on near-term catalysts. Catalysts include reorganizations, turnarounds and other unique situations that are anticipated to come to fruition in approximately six to 18 months. This short-term investment time frame often leads to high turnover. Because of the concentrated positions, the portfolio is more susceptible to movements of any one holding. **Results shown for the year 2000 represent partial period performance from April 1, 2000, through December 31, 2000. N/A-Composite Dispersion: Information is not statistically meaningful due to an insufficient number of portfolios in the composite for the entire year. N/A-3yr Std Dev: Composite does not have 3 years of monthly performance history.

Individual holding performance and contribution methodology as well as a list of every holding's contribution to the strategy can be obtained by contacting Confluence. Material is published solely for informational purposes and is not an offer to buy or sell or a solicitation of an offer to buy or sell any security or investment product. Holdings identified do not represent all of the securities purchased, sold or recommended. Information is presented as supplemental information to the disclosures required by GIPS® standards. Opinions and estimates are as of a certain date and subject to change without notice. Investment or investment services mentioned may not be suitable to an investor and the investor should seek advice from an investment professional, if applicable. Past performance is no guarantee of future results. Investing in securities involves the risk of loss of the amount invested that investors should be prepared to bear. There can be no assurance that any investment objective will be achieved or that any investment will be profitable or avoid incurring losses. Indices: The S&P 500 Index and Russell 3000 Value Index are shown as additional information. These indices are unmanaged. An investor cannot invest directly in an index. They are shown for illustrative purposes only & do not represent the performance of any specific investment. Index returns do not include any expenses, fees or sales charges, which would lower performance.
